

What the Waiting Did

Teacher copy (everything in the student copy, plus answers and teaching notes)

The article, marked for rhetorical devices (one color throughout):

1 Waiting used to be the ordinary weather of a life. You wrote a letter and waited weeks for the reply. You wanted a song and waited for the radio to play it. You missed a fact and waited, sometimes for years, to learn it. [Anaphora] None of this was a virtue. It was the plain cost of being alive, back before that cost was quietly abolished.

2 The abolition is a gift, and it would be foolish to pretend otherwise [Concession and refutation]. A parent now reaches a child in a held breath. A test result arrives before the dread has time to settle. The busy signal, the layaway counter, the long line at the bank: speed has retired a hundred small daily humiliations, and almost nobody who lived through them misses the waiting itself. We bought back the time we used to lose, and we were right to want it.

3 And yet [Shift / volta] something went out of the world along with the waiting, something we were never given a price for. The wait had never been only an absence; it was a room [Metaphor]. Inside that room the mind did its slow and unsupervised work, rehearsing and dreading and hoping and changing its own position before anyone else could watch. The letter you waited three weeks for was answered, in part, by the three weeks. Boredom, the most maligned of states, was often just thinking with the lights off.

4 We did not only lose the wait; we lost what the wait used to make in us. Patience, yes, but also the second thought, the cooled temper, the letter never sent [Parallelism]. Speed keeps its promises. [Telegraphic sentence] It is the promises of slowness that go unrecorded, because a thing that never happens leaves behind no receipt.

5 So the real question is not whether to go back. Nobody is going back, and the radio is not returning to make us wait for the song. We are very good now at not waiting. The question is smaller, and harder. It is whether a life that need never pause has quietly stopped doing the work that only the pause once did. And whether we would even notice the loss now, with nothing left in the day to make us wait for it.

Devices, and why they are here:

Anaphora (paragraph 1): “You wrote a letter and waited weeks for the reply. You wanted a song and waited for the radio to play it. You missed a fact and waited, sometimes for years, to learn it.”

The three sentences all open with “You,” pulling the reader into the habit of waiting and making three unlike losses feel like one shared condition. The repeated opening builds a rhythm that the short line after it (“None of this was a virtue”) then breaks. The repeated word sits at the START of each sentence, which is what makes this anaphora and not parallelism.

Concession and refutation (paragraph 2): “it would be foolish to pretend otherwise”

The writer grants the other side its strongest point, that speed is a real gift, fully and in good faith.

Conceding first earns the standing to turn against speed later, so the argument reads as a fair conclusion

rather than a reflex complaint.

Shift / volta (paragraph 3): “And yet”

Two small words pivot the whole piece from praising speed to counting its cost. Placing the turn here, early and plainly, signals that the real argument is only now beginning.

Metaphor (paragraph 3): “it was a room”

Recasting the empty wait as “a room” turns an abstract loss into a space the reader can picture and the mind can occupy. The metaphor carries the essay's central claim: that waiting was where private thinking got done.

Parallelism (paragraph 4): “the second thought, the cooled temper, the letter never sent”

Three matched noun phrases make the vague idea of “what the wait produced” concrete and countable. Because the repeated structure sits inside the sentence rather than at the start of successive clauses, this is parallelism, not anaphora.

Telegraphic sentence (paragraph 4): “Speed keeps its promises.”

The four-word sentence lands flat and fast, its clipped speed imitating the very thing it names. Its brevity throws the weight onto the long, slower sentence that answers it, where the real point waits.

AP-style multiple choice:

1. The phrase “And yet” that opens the third paragraph chiefly serves to
 - A) concede that speed has brought no real benefits
 - B) mark the turn from granting speed's value to questioning its cost
 - C) introduce a personal anecdote from the writer's own life
 - D) restate the essay's conclusion before the evidence
2. The brief sentence “Speed keeps its promises.” set against the longer sentence after it primarily works to
 - A) supply a statistic that proves speed is efficient
 - B) let the plain, clipped line throw emphasis onto the ‘promises of slowness that go unrecorded’
 - C) make an emotional plea to give up modern technology
 - D) express the writer's uncertainty about the argument

Multiple choice answer key:

1. **Answer B.** The shift (volta) pivots the piece from the concession of paragraph 2 to the argument that follows.
2. **Answer B.** The telegraphic sentence's brevity sets up the antithesis and weights the longer line that names what slowness quietly offered.

Discussion questions:

1. The writer spends a whole paragraph agreeing that almost no one misses waiting before arguing that we lost something real. How does conceding the other side first change the way the later claim lands?
2. The essay reframes waiting as “a room” where the mind works. Find one other place where the writer turns an abstract idea into something concrete, and explain what that lets the reader see or feel.

Sample strong discussion responses:

1. A strong answer notes the concession is strategic: by granting in full that speed retired real humiliations and that no one misses the wait, the writer removes the easy objection that this is mere nostalgia. Having been fair, the later claim that we lost the mind's private work reads as an earned conclusion rather than a complaint.
2. Besides “a room,” the writer makes the loss concrete in the parallel series “the second thought, the cooled temper, the letter never sent” and in “thinking with the lights off.” Each turns an abstraction (patience, restraint, boredom) into a nameable thing, so the reader feels the loss as specific rather than vague.

Writing prompt (homework or extended in-class, Q3 argument):

The writer suggests that a life that “need never pause” may have “quietly stopped doing the work that only the pause once did.” Defend, challenge, or qualify the claim that something valuable is lost when waiting disappears from everyday life. Use your own knowledge, observation, or reading.

Common misconceptions to watch for:

- Students often call the three “You...” sentences in paragraph 1 parallelism. They are anaphora: the repeated word opens each sentence. Reserve “parallelism” for repeated structure that does not begin the clause, like the series in paragraph 4.
- Students may take the concession in paragraph 2 as the writer's settled view. It is ground granted on purpose; the writer agrees in order to turn, not to give up the argument.
- Students may label “it was a room” a simile. There is no “like” or “as”; it is a metaphor, an implied identity.

AP exam alignment:

Q2 rhetorical-analysis value: a compact text for teaching the concession-then-turn structure, the anaphora-versus-parallelism distinction, a clearly marked shift (volta), and a single load-bearing metaphor students can name and defend. The clipped telegraphic sentence set against the long cumulative one is a clean lesson in how sentence length alone creates emphasis.
